

PREGROWN SEDUM TILE

Description:

Pregrown 15" x 20" sedum tiles can be used with both Trays and Multi-Layered Vegetative Roof systems. The tiles can be trimmed to fit any shape, including curves and various angles. Choose from one of four standard mixes, or create a custom mix to suit your specific project needs. Contact a CGT representative for more information regarding custom pregrown tiles.

Benefits:

- Quick and Easy Installation
- Immediate Vegetative Cover
- Minimal maintenance requirements once established
- The coconut fiber base assures effective rooting of the plants to the underlying growth media.

Technical Data:

- Vegetation- Minimum 95% coverage
- Coconut Fiber/ Soil base- Approximately 1" thick
- Measurements- 15"w x 20"l x 2"-3"h
- Area- 2.08 square feet per tile
- Max Weight- 4.5lbs/sf fully saturated

Installation:

Install SEDUM TILE® directly over a minimum 2" freshly wetted and leveled growth media. Maintain good overall contact with the media avoiding gaps between and beneath the TILE®. Water thoroughly after installation. Overhead irrigation is recommended twice weekly until the roots become well established, which usually takes 3-4 weeks. Plantings made during very cool fall weather may need only one initial irrigation.

Storage:

- Store sedum tiles outside before planting. In general, protect sedum tiles from extreme temperatures. If hot, move them to a shady location. Protect them from frost and shelter them from harsh winds.
- They can be kept in a warehouse for a day or two, as long as they are kept cool. The sedum tiles may remain in the pallet shipper trays for a maximum of two days before they need to be unpacked and exposed to light and air. Once exposed to light and air, water thoroughly once every three days until planting.

Precautions:

- Do not leave plants in hot closed storage areas.
