

Metal Edger

Description:

The Metal Edger for our tray and layered green roof systems is used to define and separate green roof areas from adjacent paving, vegetation-free zones, or parapets. The edger is flexible, multi-height, crafted from durable aluminum. The edger has a sturdy L-shaped profile, and a slotted wall to allow for water runoff.

- Engineered for use in Layered and Tray green roof applications. Used to retain green roof media, rock ballast and pavers for rooftop walkways.
- Made from 1/8" Thickness Extruded Aluminum
- Available in Mill or Black DuraFlex Finishes.
- Lightweight, flexible restraint that provides a finished look and assures an easy installation around curves and corners.
- Prefabricated corners, height extenders and other compatible accessories are available. *Mill Finish*

Installation:

1. Place edging in locations show on project plans. Edging is held in place by the weight of the media or other ballast. No physical attachment to the roof required. Edging should be placed on top of the membrane and any other drainage layers/slip sheets, as directed by specification.
2. Connect adjacent sections by sliding a 2-3/4" (702mm) sliding connector (provided) into the channel at the end of each section. This should be done on both the wall and the base.
3. To create corners or curves, remove the twist-and-snap tabs and form to the desired angle or curve.

Storage:

- Store components in a flat, dry area
- Store away from sources of ignition and extremely high temperatures.

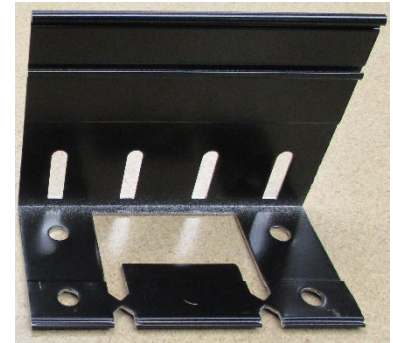

Precautions: Use caution when handling edging as it may be sharp.

LEED/Materials and Resources information:

- Manufacturing Location: Holland, MI 49424
- Recycled Content: Post-Consumer 6%; Post-Industrial 49%.
- 100% Recyclable

Packaging/Component Size*:

*These are the most common sizes. Many other sizes are available.

Black Duraflex Finish

Product Name	Item #	Dimensions	Length	Product Weight
Edge Flashing 3.5" x 4.5" Alum	EF5105	3.5" Ht. x 4.5" Base	8 lf.	6 lbs. / pc.
